

Thrive Scholars Mentorship Platform

Project Overview

Live app: <https://thrive-scholars.vercel.app>

Overview

Thrive Scholars now has an end-to-end mentorship platform that takes a scholar from **sign-up** → **AI match** → **scheduled sessions** → **tracked outcomes**, with a full staff console to manage every step and automations that keep Salesforce and email in sync.

Three roles, three tailored experiences:

- **Scholars** — see their match, book sessions, complete prep, track progress.
- **Volunteers** — accept a mentee, share availability, run and log sessions.
- **Staff / Program Managers** — review and approve matches, manage programs, monitor everything.

Requirement coverage

Requirement	Status
Scholar & volunteer profiles (identity, interests, career, alma mater)	✓ Built
AI-powered matching with tunable, per-program weights	✓ Built
Multiple program types (mentorship year, coffee chat, mock interview, resume review)	✓ Built
Program-manager review & approval workflow	✓ Built
Two-sided accept / decline with timeout escalation	✓ Built
Scheduling via Cal.com	✓ Built
Interaction tracking (held/missed, ratings, notes) & self-confirmation	✓ Built
Training / prep content per audience & program	✓ Built
Automated session reminders & customizable communications	✓ Built
Corporate-partner & star-volunteer tracking; inactivity nudges	✓ Built
Automation audit trail	✓ Built
Salesforce sync (contacts, matches, interactions → case plan)	● Ready to connect
Email delivery to all users (notifications, reminders, reset)	● Ready to connect

Security & privacy

The platform protects scholar information at the data layer, not just the interface:

- **Access controls** — every record is protected by database-level Row Level Security. Users only ever see their own data, and a scholar's personal information is never exposed to other users.
- **Encryption** — all data is encrypted in transit (TLS) and at rest, on managed, automatically backed-up infrastructure.
- **Authentication** — passwords are securely hashed (never stored in plaintext), with secure, time-limited password resets.
- **Integrations** — the Salesforce connection is authenticated and exchanges only record identifiers, never bulk personal data.
- **Compliance-ready** — the access model is designed to support FERPA-style data minimization and need-to-know access.

Final steps to go live

Two items remain, and both require Thrive-side access rather than further development:

- **Email domain** — verify a Thrive sending domain so notifications, reminders, and password resets reach real scholars and volunteers.
- **Salesforce connection** — provide API access and the object model so matches, interactions, and contacts sync to the case plan. The platform's sync endpoints are already built and waiting.

Everything else is built, deployed, and working today.

Prepared for Thrive Scholars.
